

: To be able to share a total equally between a set number of groups

First, share the objects equally into each group (you like to count out the objects in the pictures using counters, pieces of dried pasta, paper clips or anything other small household objects).

Next, draw the objects in the groups.

Last, count how many are in each group and write in the box underneath the picture.

--	--

There are cakes in each group.

--	--	--

There are pears in each group.

--	--	--	--

There are flowers in each group.

--	--

There are glasses in each group.
